**RS·RT**

## Technology Made in Italy

EN

Since 1955 Varvel has been making speed reducers and variators for light industry applications. Reliable partner in power transmission equipment offers also customized solutions always according to a socially responsible company values. Modularity and flexibility lead Varvel products by a unique kit form, common to all gearbox series. This feature allows distributors an easier job to set up required products in few minutes.

## Product description

**Multipurpose mounting**  
Aluminium die cast  
and Cast iron (from size 110 up)

**Wormshafts**  
ZI profile  
hardened and ground  
alloy steel

**Wormwheels**  
bronze alloy cast & cast iron hub

**Bearings**  
ball or roller types.  
Tapered roller types at output  
for heavy duty applications.

**Input**  
IEC and NEMA  
motor adapters and coupling  
or traditional key/keyway fitting

**Oil seals**  
NBR as standard  
Viton and Silicone on request

**Output**  
hollow bore as standard  
single or double solid shaft  
on request

**Modular attachments**  
One-stage helical input, Output flanges,  
Torque arm, Torque limiter.

### RS and RT - Single-stage worm gear boxes

The worm gearboxes, RS and RT series, specifically designed for universal mounting, are manufactured with aluminium die cast housings and covers up to the size 85 and cast iron from the size 110.

Torques listed in selection tables are output torque values; input motor powers are always referred to 1440 rpm.

On request, input Viton oil seals allow trouble-free operation with 2-pole standard AC, brushless or 3000 rpm DC motors, and Silicone oil seals are recommended for low temperatures.

Gearboxes are delivered filled with synthetic long-life oil (without plugs), see filling quantities at page 17, and valid for all mounting positions.

Selection table data are intended for service factor SF1.0, i.e. 8-10 running hours per day, uniform load, less than 6 start/stops per hour, and room temperature ranging from 15 to 35 °C .

### RA and TA - Helical worm gear boxes

The helical/worm gearboxes, RA and TA series, made by of an independent single stage helical gearbox FXA fitted to a standard FRS or FTR gearbox, allow greater output torques and higher efficiency than the FRS and FRT gearbox with equivalent ratios.

### RS/RS and RT/RT - Two-stage worm gear boxes

The gearboxes, RS/RS and RT/RT series, are made of two gearboxes RS or RT and offer a full selection of high reduction ratios to obtain low output speeds and high torques.

## Gearboxes RS - RT

### Product description

#### AS, AD - Output shafts

All gearboxes are manufactured with hollow output shaft as standard. Optionally, a single AS or double AD solid output shaft - made of steel C43 - can be supplied.

An ASC safety shield for the opposite side of a single output shaft AS, is available on demand.

#### BR, BT - Torque arms

Standard gearboxes are normally supplied with covers on each side to allow the torque arm fixing when gearboxes have to operate as shaft mounted units.

The torque arm, standard or with Vulkollan vibration damping, is made of extra thick plate and white galvanized.

#### TLI/TLE - Torque limiters

The torque limiter and safeguard device - TLI built-in inside the gearbox and TLE fitted outside - allows easy torque adjustments, full gearbox safeguard against unexpected overload conditions, simple hand release, and manual operation in case of power supply failure.

The factory preset slipping torque can be adjusted from the maximum preset torque down to zero.

Shaft rotation restarts automatically as soon as torque value is lower than the preset value.

Oil quantity of torque limiters TLI are listed on page 42 and 50.

#### SL - Travel limiters

The SL travel limiter device stops - by means of built-in limit switches - the gearbox after a given operation time.

Standard thread allows approx. 40 turns of the output shaft.

The limit switch travel is adjustable and operation time varies upon the used reduction ratio from min. 12 to max. 170 seconds.

#### Directive ATEX

The gearboxes VARVEL-ATEX, supplied on demand, are designed and manufactured according to Directive 94/9/CE "ATEX" and therefore, they are qualified for installation in potentially explosive atmospheres:

- Zones of Group II,
- Category 2 (or 3),
- Explosion hazard with gas presence (Zone 1 or 2),
- Explosion hazard with combustible dust presence (Zone 21 or 22).

The units VARVEL-ATEX are identified by the additional marking:

 II 2 GD ck IP66 T<sub>max</sub>=135 °C

## RS - RT Gearboxes

### Product description

	<b>GENERAL SPECIFICATIONS</b>
Range	Sizes: 9 RS + 7 RT 55 reduction ratios 3020 Nm max. output torque
Sizing	According to BS721. 15,000 hrs average lifetime with service factor SF1
Housing, Covers	Pressure die cast aluminium till size 85 Cast iron from size 110.
Coupling G input	Pressure die cast aluminium
Toothed parts	Worms of steel CH and tooth profile ground. Wheels of bronze on cast iron hub.
Shafts & Keys	Steel Tolerances: shafts h6 - bores E8 Keys according to DIN6885 B1
Hollow output shaft	Steel, grey or ferritic cast iron according to gearbox size
Bearings	Ball- or roller-types according to sizes and technical requirements
Oil seals	Type NB - nitril-butadiene with additional anti-dust lip according to DIN 3760
Lubricant	Synthetic long-life oil Grade ISO VG 320
Coating	RS/RT $\geq 110$ : epoxy powder paint, std colour RAL 7012. RS/RT28-85: real aluminium.
Protection Grade	Gearbox body IP66. Motor and connection flanges IP20; increased protection on demand.

## Flexible coupling "G"

### Reducer Half-coupling

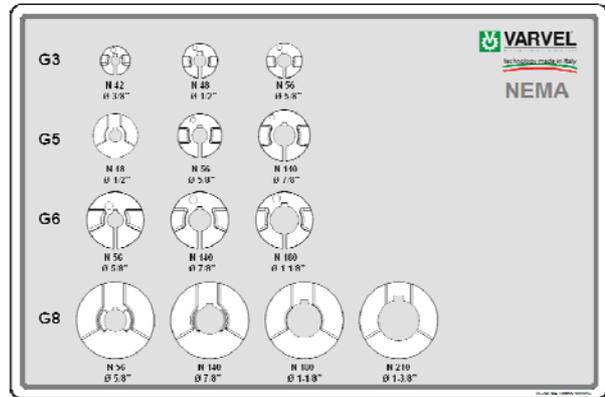

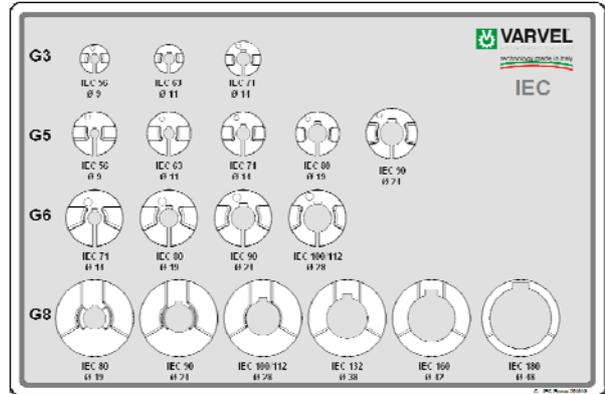

- Material: steel
- One-piece machined on Input shaft
- Two bearing setting
- Unchanged casing dimensions

### Spider

- External tooth connection
- Material: Thermoplastic Elastomer:
  - Hytrel® TPE - PolyEster
  - Ixef® TPA - Piyarilamide
- Hardness
  - TPE 72 Shore D
  - TPA 90 Shore D
- Temperature
  - TPE -30/+100°C (-22/+212°F)
  - TPA -30/+135°C (-22/+275°F)

### Motor Half-coupling

- Material:
  - Alu pressure die cast (G3, G5, G6)
  - Steel (GS8)
  - Steel on demand (GS3, GS5, GS6)
- Dynamic balancing
- Fitting:
  - Clamp (G3,G5, G6)
  - Key (GS3, GS5, GS6)
- Bores, available according to:
  - IEC 72 / DIN42948
  - NEMA C and TC

### Advantages:

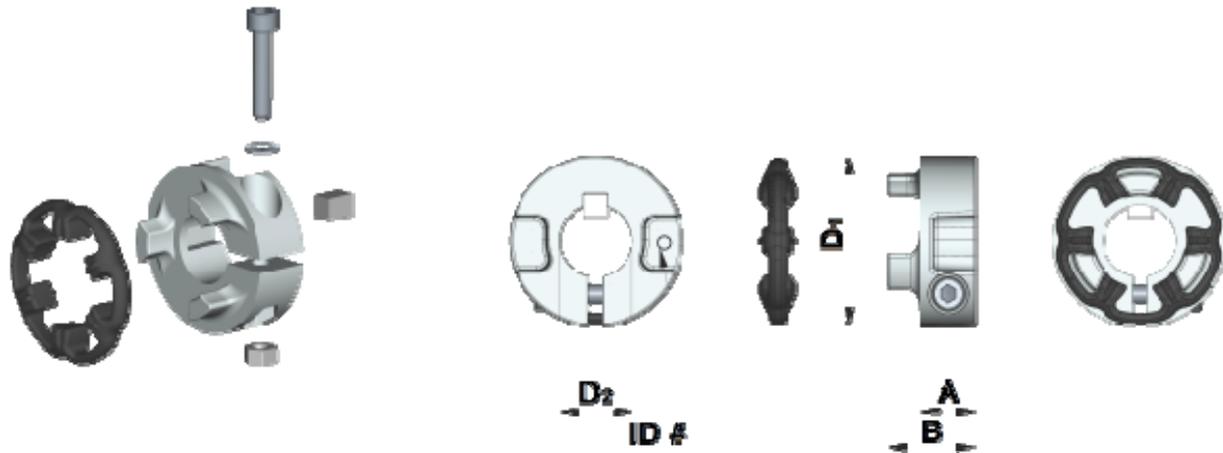

- One gearbox only for each reduction ratio
- Greater flexibility
- Increased stock rotation
- Elimination of fretting corrosion between key and keyway
- Gearbox / motor connection with zero backlash
- Allowed angular misalignment 1° max.
- High torsional rigidity
- High vibration damping

### Input flanges:

- Material:
  - Aluminium up to IEC112 & NEMA TC180
  - Cast iron from IEC 132 & NEMA TC200

### Modularity and flexibility

have been leading the design of Varvel products since 2000.

The gearbox-kit concept was carried out allowing anyone to assemble the unit in a few minutes with standard tooling. This feature provides the highest flexibility to Varvel's distributors and resellers who - thanks to a limited kit selection - are able to immediately configure the required product.

VARsize® selection program, available from our site

[www.varvel.com](http://www.varvel.com)

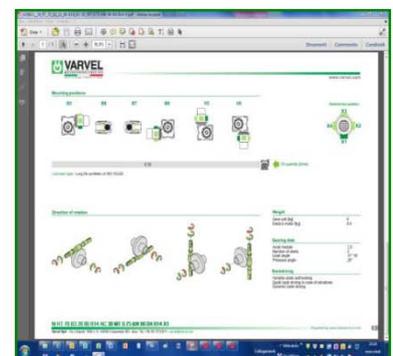

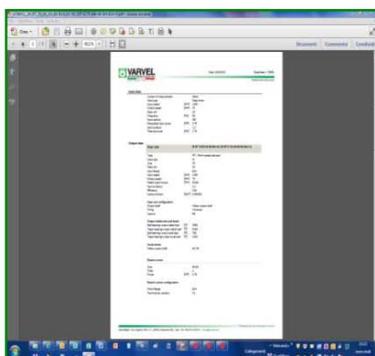

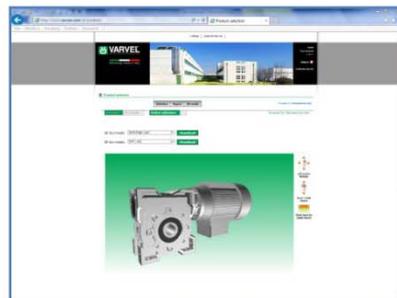

allows easy sizing selection from the Varvel product range.

### 2D/3D Drawings

A guided selection allows the 2D drawing / 3D model downloading for the most popular CAD systems.

### Guided selection

The suitable product configuration returns upon a given sequence of application parameters (power, output torque, rpm, service factor, etc.) a PDF data sheet including performance data, and 2D dimensional drawings are generated accordingly. A 3D model is also available as alternative output

## Gearboxes RS - RT

### Reversibility and Irreversibility

When back-driving a worm gear set using the worm wheel as input, the efficiency is lower than forward-driving and, by varying the design data, back-drive efficiency can be reduced to zero obtaining a self-locking, or irreversible, gear set.

When back-driving the worm gear, internal friction tends to lock the mesh, and the bigger the applied torque is, the more mesh friction increases proportionally augmenting the lockage at the same time.

The most obvious example is during braking or slowing-down where the inertial load will try to back-drive the worm shaft.

A worm gear is intended as a self-locking unit when the lead angle is less than the friction angle (arc tangent of friction coefficient).

Tooth contact is dynamic even when the mesh velocity is zero, as vibrations in a non-rotating gear set can induce motion in the tooth contact.

To provide a safety factor, a 3° lead angle is recommended for full self-locking condition, and 10° lead angle for poor self-locking condition, according to the table of relations between lead angles and self-locking,

Lead angle	Static self-locking
$\beta > 20^\circ$	Full back-driving
$10^\circ < \beta < 20^\circ$	High back-driving
$5^\circ < \beta < 10^\circ$	Good back-driving Poor self-locking
$3^\circ < \beta < 5^\circ$	Poor back-driving Good self-locking
$1^\circ < \beta < 3^\circ$	Full self-locking

## Operation and Maintenance

### Abstract of OPERATION AND MAINTENANCE INSTRUCTIONS

(complete manual on [www.varvel.com](http://www.varvel.com))

Variable speed and reduction gearboxes are not part of the field of application of the Machinery Directive, art,1(2), and they must not be put into service until the machinery into which they are to be incorporated, has been declared in conformity with the provision of art,4(2), annex II(B) of Machinery Directives 98/37/CEE/22,6,98 and for Italy only, of DL 459/24,7,96.

#### Installation

Check if the unit to be installed, is properly selected to perform the required function and that its mounting position complies with the order.

The nameplate reports such information.

Check mounting stability to ensure the unit runs without vibrations or overloads.

#### Running

The unit may be connected for clockwise or counter-clockwise rotation.

Immediately stop the unit, as soon as defective running or unexpected noise occur, remove the faulty part or return the unit to the factory for checking.

If the faulty part is not replaced, other parts can also be affected, causing more severe damage and making the identification of initial cause more difficult.

#### Maintenance

Although the units are tested with no load in the factory before despatch, it is recommended not to run them at maximum load for the first 20-30 working hours to allow the proper running in.

The gearboxes are delivered already filled with long-life synthetic oil and, in case of replacement or top up, this type of oil cannot be mixed with mineral lubricants.

#### Handling

When hoisting, use relevant housing locations or eyebolts if provided, or foot or flange holes

Never hoist on any moving part.

#### Painting

Carefully protect oil seals, coupling surfaces and shafts when units are repainted.

#### Long-term storage

For storage longer than three months, apply antioxidants onto shafts and machined surfaces, and protective grease on oil seal lips.

#### Product's Environmental Management

In conformity with Environmental Certification ISO 14001, we recommend the following to dispose of our products:

- scraped components of the units to be delivered to authorized centres for metal object collection;
- oils and lubricants drained from the units to be delivered to Exhausted Oil Unions;
- packages (pallets, carton boxes, paper, plastic, etc.) to be placed in the appropriate bins, in order for authorized companies to pick them up according to the waste types.
