

Rodless cylinders with roller guide

Series ZX-Ø-SR

G1/8 to G3/8 • piston Ø 25 to 63 mm

Order code

Design and function

Double acting rodless cylinder with adjustable cushion and permanent magnet. The SR series rodless cylinders includes integrated hardened steel shafts and hardened rollers for smooth and precise movement under high force and torque.

The sensors can be installed directly into the grooves of the aluminum profile.

Cylinders of this series are available in explosion proof design in accordance with 2014/34/EU (ATEX). For further details see chapter 13 of this catalogue.

Rodless cylinders series ZX

Accessories

Air connection for series ZX-Ø-S and ZX-Ø-K

Option -01

Option -01 cylinder comes with two pressure connections (W-X and Y-Z respectively) on each end. User is required to select one of two pressure connections on each end. Second port will require the installation of a sealing plug (2 plugs are supplied).

Option -02

Cyl.-Ø	A	B	C	D	E	F	G
25	G1/8	28.5	13.5	8	11	29.5	13.5
32	G1/8	34.5	17.5	9.5	9.5	34.5	17.5
40	G1/4	42.5	20.5	11.5	11.5	38.2	15.5
50	G3/8	59	29	17	17	59	29.6
63	G3/8	68.4	34	17	17	68.4	34

One cylinder head is supplied with 6 ports (3 for each direction, U-V-W are for travel in one direction and X-Y-Z are for travel in the opposite direction). User is required to select one of three pressure connections for each direction. The second and third ports will require the installation of a sealing plug (4 plugs are supplied).

Ports V and Y must be plugged when using a head mount.

Air connection options for series ZX-Ø-S and ZX-Ø-K

Option -04

Option -04 enable to connect pressure at both face ends or one face and one side port. Therefore the head with 6 ports from option -02 is used at both ends. Now it is possible to use the upper ports (U-V-W). The lower ports (X-Y-Z) are plugged. This option is for using ports at both cylinder heads only. The dimensions are identical to option -02.

Seal kit for series ZX

The mounting surface of the assembled mass should not exceed a straightness tolerance of 0.1 mm to avoid additional tension or clearance in the guiding system.

Complex loads

If more than one force and torque appear simultaneously, they have to be calculated by the formula:

$$\frac{F_n}{F_{n \max.}} + \frac{F_q}{F_{q \max.}} + \frac{M_l}{M_{l \max.}} + \frac{M_q}{M_{q \max.}} + \frac{M_s}{M_{s \max.}} \leq 1$$

Information on forces and torques refers to speeds for slide guides (series S, K, SG and KG) of ≤ 0.2 m/s (0.656 ft/s) and speeds for roller guides (series SR and KR) of ≤ 2 m/s (6.562 ft/s).

Where speeds exceed 0.2 m/s (0.656 ft/s) the permissible values of the slide guides are to be multiplied by the loading coefficient (see table on the right).

The information on torques refers to the center point of the slide which, in the case of the ZX-S and ZX-K cylinders, is the center of the tube. In versions with slide guides, the center point of the guide is in the slide.

* Operating force at 6 bar (87 psi). The internal friction is considered.

Loading coefficient

V in m/s	V in ft/s	Factor
0.2	0.656	1
0.3	0.984	0.75
0.4	1.312	0.5
0.5	1.640	0.4
0.75	2.460	0.27
1	3.281	0.2

Cushioning diagram

The stroke end cushion must be adjusted to hitchless driving. If the application is out of the diagram range, an external shock absorber is required. The mounting position of shock absorbers must be close to the center of the mass.
The data applies to a horizontal mounting position.

$r_{max} = 50\text{ mm}$
for piston- $\phi 25\dots 63\text{ mm}$

For additional loads, please consider the allowed maximum forces and torques on page 10.140.

$r_{max} = 50\text{ mm}$
for piston- $\phi 25\dots 63\text{ mm}$

Deflection
